

Product Fact Sheet

Rhino Hybrid 1-Rail™ Post

Description

The new Hybrid 1-Rail post incorporates the best qualities of fiberglass and plastic. Specially designed reinforcing fibers are blended with UV-stable plastic to create a flat post with the bright color of plastic and the impact-resistance of the combined fiberglass and plastic. This hybrid post has no exposed fibers that can cause skin irritation or fiberbloom.

Product Integrity

The hybrid design allows the post to bend over when hit, then snap back into its normal upright position. The hybrid post can be driven into most soils.

Fade Resistance

This special blend of materials provides maximum fade resistance. The hybrid post is guaranteed not to fade significantly or become brittle for a minimum of 10 years. All Rhino products are batch tested in our own weatherometer.

Temperature Stable

The hybrid post works extremely well in both heat and cold. The post will remain stable from -40°F to 175°F (-40°C to 80°C).

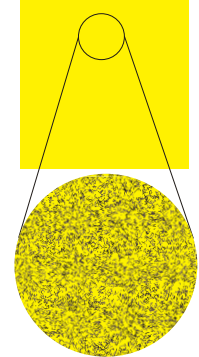

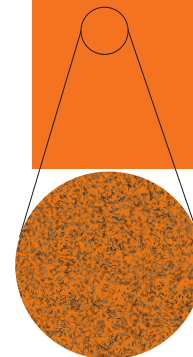

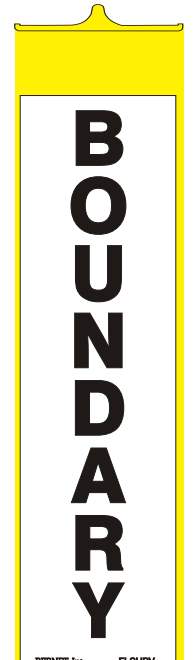

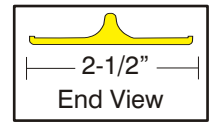

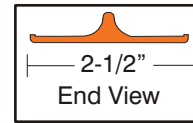

Standard Lengths

60" (152 cm), 66" (168 cm) and 72" (183 cm)

Other lengths are available, but require a minimum order. Please call for details.

Colors

Standard colors are orange, yellow, and brown. Other colors available but require a minimum order. Call for details.

Product Fact Sheet

Rhino Hybrid 1-Rail™ Post

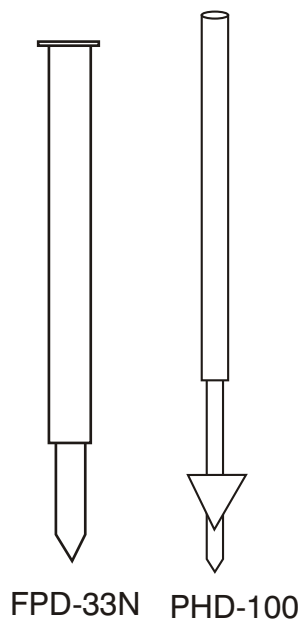

Easy Installation

The Rhino 1-Rail post must be installed using the FPD-33N Driver. The driver keeps the Hybrid 1-Rail post rigid enough to be driven directly into most soils. In some hard pan and rocky soils you will want to use the Rhino PHD-100 Pilot Hole Driver.

Decals

The Hybrid 1-Rail Marker Post uses decals that are 2-1/2" (63mm) wide. You can choose from the many standard decals we have available or we can create a custom decal for you- just give us a call.

All Rhino decals are engineered using our exclusive Rhino Decal Technology (RDT) to ensure superior readability, minimum 10-year longevity, and permanent adhesion- the absolute best in the industry!
